<b>Description</b>			
<p>To solder the BBM and keep some history of what has been done, we need an up to date schematics with correct part values. For some parts such as regulation tune resistors just update the schematic. For parts we have several options, we can either add a text table next to the component or maybe (should be possible with kicad) set value field with a coma separated list of values. Anyway we will produce as-built for each boards once soldered and tested.</p> <p>Once the schematic updated I can take care about pushing on github.</p>
